

# Read Me

This is a simple login system, including the message board developed by MAMP (Apache, MySQL, PHP). Before use, there are some steps to be done:

1. Please use any way to import it to your MySQL databases, such as using NaviCat, phpadmin, even console. The database name is “test”.
2. Then, please change the user name and password of your SQL in 2 positions:
  - A) conn.php
  - B) checklogin.phpThe default value is “root”, “root” for MySQL in my project.

Then, you can run the index.php to homepage of my Project. You can use “admin”, “admin”

1. This is a simple login message board. The function as following:
  - . a) You can login, register and logout.
  - . b) You can add, edit and delete the messages
  - . c) When click the title link, you will enter a detail page about the content, and then you can find the number of the

page view  
times, which will add one when fresh the  
webpage.

- . d) You can use the search function to look for  
the key word in any  
title.

2. And last,in this project,I don't use any template,so  
please forgive  
me that the CSS and layout is poor.

3. In fact,I want to add the \_session to the login  
system,but I got some trouble during the process. So  
I have make the session code commented. And I will  
still try it later.

If there are any problems, please contact me.
